

HS SLIDING DOORS

Different planes doors

This door, even in its biggest available dimensions (may reach up to 3.2 m in height and 2 m in width), is still very easy and pleasant to control.

Since sliding and fixed parts of this door are mounted in different planes, simply by moving the handle the sliding part of the door is lifted and then it can be easily shifted.

HS(different planes)doors also characterize for the convenience of closing both from the inside and from the outside. Another advantage of this wooden door model is a lowered aluminum threshold, which is largely inserted under the floor line.
