

PSK / PATIO SLIDING DOORS

Sliding doors

It is an optimal solution for those, who search for warm and impermeable sliding door at an attractive price.

The design of these wooden doors is similar to the design of the most popular in Lithuania European type windows. The only difference is that the built-in hardware device enables the door panel to draw out and move back and forth within tracks. We recommend choosing PSK / Patio sliding doors in standard and small dimensions, also when they will be commonly closed from the inside and not from the outside. Please keep in mind that you must have 80 mm high wooden frame under such door, which shall not be built in the floor.
